

Press Release

Like a snow capped volcano ...cold outside (-7°C!) and hot inside (projects, projects, projects!) ... Biogaz Europe again cleanly etched itself onto the French renewable energy landscape in Rennes last week.

The event, as for previous editions, was characterized by two intense and fast moving days on the floor. Underscoring the down-to-business mood was a clear trend towards project realisation. Across the visitor groups, a sense of optimism is beginning to return for the coming year after a quiet 2016, as far as new projects seeing the light of day was concerned.

Carrefour des Gestions Locales de l'Eau

Biogaz Europe teamed up this year for the first time with the Carrefour des Gestions Locales de l'Eau to stage both events in parallel! This new partnering assured a fuller spectrum event offering a unique cross-over between the worlds of water, agriculture, waste and energy.

Water management and biogas/biomethane generation are entering a dynamic new phase of collaborative development and the co-positioning of these two leading events in France was designed to allow both sectors to fully exploit the resultant emerging opportunities. The high number of visitors and exhibitors crossing over from one to the other proved the pertinence of this co-positioning.

Visitors

Visitor numbers were consequently boosted this year by the co-positioning with the Carrefour des Gestions Locales de l'Eau, **2300 visitors¹ an increase of around 10%** compared to the 2016 edition. It was however not only the increased number of visitors that marked out the event, but also the broad sectoral and international representation, with more than 20 countries represented.

¹ verification/certification pending

Exhibitors

Exhibitor numbers **rose by 5% to 231** and again the international representation was high at 30% from across 12 countries: Germany, Austria, Belgium, Denmark, Spain, Italy, Luxembourg, Netherlands, Czech Republic, United Kingdom, Switzerland, Turkey. Floor space occupied also rose to 7 000m².

Conferences

The event comprised a rich programme of conferences. Broad forecasts were provided at the regional level by partners of the "Plan Biogaz", and at the national level by ADEME, as well as négaWatt (presenting its brand new forecast for a 100% renewable energy France by 2050)... And as usual several workshops focused on key biogas topics, illustrating new innovations and future opportunities: BioCNG, biomethane, roadside mowing utilisation, substrate preparation, new substrates... you name it! For the first time on Biogaz Europe, links between anaerobic digestion and environmental protection have also been discussed, and the joint event with Carrefour de l'Eau was a good opportunity to deal with biogas from ²WWTP sludge as well.

The presentations are available for download from the website: www.biogaz-europe.com

Innovation Competition

The Innovation Competition rewards the most significant innovations of the year and often provides a compass reading of future trends. See the Awards report below for more details of the innovations that were rewarded this year.

² Waste Water Treatment Plant

International Business Meetings

The International Business Meetings organised by the Brittany Chamber of Commerce and Industry and Enterprise Europe Network also recorded high levels of participation with a 50:50 split between exhibitors and visitors and more than 100 meetings over a one day period. **40%** of the participants were international.

Study Tours

Two study tours were organised the day before the exhibition openings : the first one visited the first biomethane injection project in Bretagne, and a WWTP producing biogas from its sludge (the smallest unit to do so in France). The second tour visited a biogas unit at a farm, collecting biowaste from its nearby surroundings.

BioCNG vehicles - showing it live !

A highlight of the event was the presence of a number of BioCNG vehicles available for a test drive! Thanks to all participants who brought their vehicle to further promote the development of this clean fuel - much needed at a time of increasing particle pollution.

Social Communities

If you missed the event, then you can catch up and almost relive it from the rich Twitter feed covering the full two days at @BiogazEurope - thanks to everyone for your excellent participation

We hope to see you again next year !

Concours de l'Innovation

Rennes 2017
25-26 January

OFFICIAL RESULTS INNOVATION COMPETITION

The Innovation Competition rewards the most significant innovations of the year and often provides a compass reading of future trends.

Biogaz d'Or

2017

Biogaz Europe
Concours de l'Innovation

Biogaz d'Argent

2017

Biogaz Europe
Concours de l'Innovation

A word from the jury : we sincerely thank all companies who submitted an application to the Innovation Competition, and underline the number of candidates, as well as the diversity of fields represented. We encourage the whole sector to sustain their efforts, which bear fruits year on year.

Biogaz d'Or – PRODEVAL - AgriGNV

Industrial demonstrator to produce BioCNG from biogas - a technically and economically sound solution adapted to small-scale project, thus answering a real need from the market.

Biogaz d'Argent – Enogia - ORC LTDC
ENOGIA designs, builds and installs ORC (Organic Rankine Cycle) modules, converting waste heat into power. Early 2016, ENOGIA started its DC (Direct Condensation) product range. Its innovation lies in an energy efficient air condenser, to cool down the ORC. This allows us to offer a complete heat to power system, without the need for additional auxiliaries.
